Target Details

Background:	Synonyms: E3 ubiquitin-protein ligase SMURF2, hSMURF2, SMAD ubiquitination regulatory
	factor 2, SMAD-specific E3 ubiquitin-protein ligase 2, SMURF2
	Background: E3 ubiquitin-protein ligase which accepts ubiquitin from an E2 ubiquitin-
	conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to
	targeted substrates. Interacts with SMAD1 and SMAD7 in order to trigger their ubiquitination
	and proteasome-dependent degradation. In addition, interaction with SMAD7 activates
	autocatalytic degradation, which is prevented by interaction with SCYE1. Forms a stable
	complex with the TGF-beta receptor-mediated phosphorylated SMAD2 and SMAD3. In this way,
	SMAD2 may recruit substrates, such as SNON, for ubiquitin-mediated degradation. Enhances
	the inhibitory activity of SMAD7 and reduces the transcriptional activity of SMAD2.
	Coexpression of SMURF2 with SMAD1 results in considerable decrease in steady-state level of
	SMAD1 protein and a smaller decrease of SMAD2 level.
