Target Details	
Background:	<ul> <li>Synonyms: Supervillin, Archvillin, p205/p250, SVIL</li> <li>Background: Forms a high-affinity link between the actin cytoskeleton and the membrane.</li> <li>Isoform 1 (archvillin) is among the first costameric proteins to assemble during myogenesis</li> <li>and it contributes to myogenic membrane structure and differentiation. Appears to be involved</li> <li>in myosin II assembly. May modulate myosin II regulation through MLCK during cell spreading,</li> <li>an initial step in cell migration. May play a role in invadopodial function. Isoform 2 may be</li> <li>involved in modulation of focal adhesions. Supervillin-mediated down-regulation of focal</li> <li>adhesions involves binding to TRIP6. Plays a role in cytokinesis through KIF14 interaction (By</li> <li>similarity).</li> </ul>
