Target Details	
Alternative Name:	TXLNB (TXLNB Products)
Background:	Synonyms: MDP77, LST001, C6orf198, dJ522B19.2, Beta-taxilin, Muscle-derived protein 77, hMDP77, TXLNB
	Background: Beta-taxilin promotes nerve regeneration and may be involved in intracellular
	vesicle transport. Expressed predominantly in cardiac and skeletal muscle, beta-taxilin binds to
	the coiled coil region of the syntaxin family members STX1A, STX3A, and STX4A. Beta- and
	gamma-taxilins, bind to the alpha subunit of the nascent polypeptide-associated complex
	(NAC) and affect its nuclear distribution, suggesting that the taxilin family is involved not only in
	the translational process through its interaction with NAC but also in the transcriptional process
	through its interaction with alphaNAC alone.
