containing protein 2, Zinc finger protein 216, ZFAND5
Background: Involved in protein degradation via the ubiquitin-proteasome system. May act by
anchoring ubiquitinated proteins to the proteasome. Plays a role in ubiquitin-mediated protein
degradation during muscle atrophy. Plays a role in the regulation of NF-kappa-B activation and
apoptosis. Inhibits NF-kappa-B activation triggered by overexpression of RIPK1 and TRAF6 but
not of RELA. Inhibits also tumor necrosis factor (TNF), IL-1 and TLR4-induced NF-kappa-B
activation in a dose-dependent manner. Overexpression sensitizes cells to TNF-induced
apoptosis. Is a potent inhibitory factor for osteoclast differentiation.
