## Target Details

Alternative Name: IL-20 (Interleukin 20) (IL20 Products)

Pathways: Protein targeting to Nucleus

## Application Details

Sample Volume: 100 µL

Assay Time: 3 - 4 h

Plate: Pre-coated

Protocol: This assay employs an antibody specific for Anti-humanIL-20 coated on a 96-well plate. Standards and samples are pipetted into the wells and IL-20 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-humanIL-20 antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of IL-20 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.
