**IL-19 ELISA Kit**

[Go to Product page](#)

1 Image

## Overview

Quantity:	96 tests
Target:	IL-19 (IL19)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	31.25-2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

## Product Details

Purpose:	This immunoassay kit allows for the in vitro quantitative determination of Human IL-19 concentrations in serum, plasma and other biological fluids.
Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Sensitivity:	< 18.75 pg/mL
Components:	plate, standard, diluent, antibodies
Material not included:	pipettes, tubes, reader, incubator

## Target Details

Target:	IL-19 (IL19)
---------	--------------

## Target Details

Alternative Name: IL-19 (Interleukin-19) (IL19 Products)

## Application Details

Sample Volume: 100  $\mu$ L

Assay Time: 3 - 4 h

Plate: Pre-coated

Protocol: This assay employs an antibody specific for Anti-human IL-19 coated on a 96-well plate. Standards and samples are pipetted into the wells and IL-19 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-human IL-19 antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of IL-19 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.

Restrictions: For Research Use only

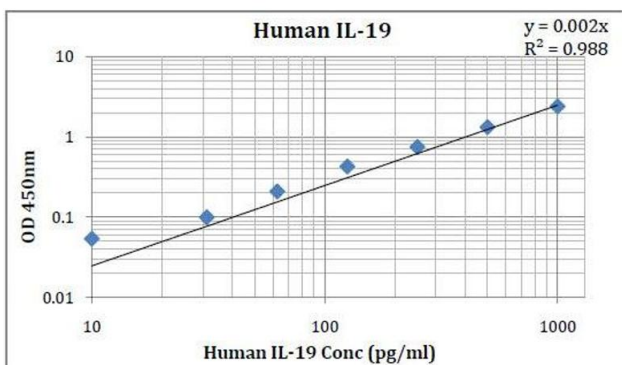

## Handling

Precaution of Use: protect your eyes

Storage: 4  $^{\circ}$ C
