CellSurface FLOW Staining Kit[Go to Product page](#)**1** Image

Overview

Quantity:	1 kit
Application:	Flow Cytometry (FACS)

Product Details

Purpose:	Flowcytometry staining kits
Detection Method:	Fluorometric
Components:	Staining Buffer 1X -4 X 60ml. Fixation buffer 10% -15ml

Application Details

Protocol:	The Cell Surface FLOW Staining Kit allows the detection of antibodies on the cellsurface proteins in Flowcytometry analysis. This kit is specially formulated to reduce non-specific staining of fluorochrome-labelled antibodies and to increase fluorescence signaling. This buffer can be used for cell and antibody dilution steps, also wash steps for the cell surface staining and flow cytometric analysis. This buffer contains Fetal Bovine Serum (FBS)to help reduce the non-specific binding of antibodies.
Restrictions:	For Research Use only

Handling

Storage:	4 °C
Storage Comment:	Store at 2-8°C
