Isotype:	IgG1
Specificity:	Specific for dityrosine modified proteins. Does not cross-react with 3,5-dibromotyrosine or bromotyrosine modified proteins.
Purification:	Protein G Purified

Target Details

Target:	Dityrosine (DT)
Alternative Name:	Dityrosine (DT Products)

Target Details

Target Type:	Dipeptide
Background:	ROS such as hydrogen peroxide (H ₂ O ₂), superoxide, and hydroxyl radicals can react with both the backbone and the side chains of proteins, leading to backbone cleavage and side-chain modifications, respectively. Peroxidases, UV radiation, and hydroxyl radicals catalyze the formation of tyrosyl radicals which then react to form cross-links between proteins (1). This produces dityrosine, a metabolically stable biomarker of protein oxidation (2).

Application Details

Application Notes:	<ul style="list-style-type: none">• WB (1:1000)• ICC/IF (1:50)• FACS (1:50)• FCM (1:50)• ELISA (1:1000)• optimal dilutions for assays should be determined by the user.
Comment:	A 1:1000 dilution of ABIN5067481 was sufficient for detection of dityrosine in 1 µg of Dityrosine conjugated to BSA by ECL immunoblot analysis using Goat Anti-Mouse IgG:HRP as the secondary Antibody.
