Target Details

Alternative Name:	NTF3 (NTF3 Products)
Background:	Protein Function: Seems to promote the survival of visceral and proprioceptive sensory
	neurons.
	Background: Neurotrophin-3(NT-3) is a new member of the nerve growth factor gene family,
	which plays an important role in the development and maintenance of the vertebrate nervous
	system. NT-3 and its receptor, called neurotrophic tyrosine kinase receptor type 3(Ntrk3, also
	called TrkC), are expressed early and throughout embryogenesis. NT-3 is one of five
	neurotrophin growth factors which shape the development of the nervous system by regulating
	neuronal survival and differentiation. NT-3 may be one of the central nervous system-derived
	factors that mediate neural crest(NC) cell proliferation in vivo. NT-3 has been mapped to
	human chromosome 12p and mouse chromosome 6.1
	Synonyms: Neurotrophin-3,NT-3,HDNF,Nerve growth factor 2,NGF-2,Neurotrophic factor,NTF3,
	Full Gene Name: Neurotrophin-3
	Cellular Localisation: Secreted.
UniProt:	P20783
Pathways:	RTK Signaling, Neurotrophin Signaling Pathway
