Target Details	
Target:	CXCL14
Alternative Name:	CXCL14 (CXCL14 Products)
Background:	Protein Function: Potent chemoattractant for neutrophils, and weaker for dendritic cells. Not
	chemotactic for T-cells, B-cells, monocytes, natural killer cells or granulocytes. Does not inhibit
	proliferation of myeloid progenitors in colony formation assays
	Background: Chemokine(C-X-C motif) ligand 14(CXCL14) is a small cytokine belonging to the
	CXC chemokine family that is also known as BRAK(for breast and kidney-expressed
	chemokine). This gene is mapped to 5q31.1. CXCL14 is constitutively expressed at high levels
	in many normal tissues, it has been found that fibroblasts are the primary source of CXCL14
	and that CXCL14 is involved in the homeostasis of monocyte-derived macrophages rather than
	in inflammation. It is also a potent chemoattractant and activator of dendritic cells, is
	implicated in homing of these cells, and can stimulate the migration of activated NK cells.
	CXCL14 also inhibits angiogenesis, possibly as a result of its ability to block endothelial cell
	chemotaxis. In addition to it, CXCL14 is a potent chemokine for immature DCs, with a
	chemoattractive activity comparable to bacterial fMLP and MIP1A.
	Synonyms: C-X-C motif chemokine 14,Chemokine BRAK,MIP-2G,Small-inducible cytokine
	B14,CXCL14,MIP2G, NJAC, SCYB14,PSEC0212, UNQ240/PR0273,
