Alternative Name:	SFRP5 (SFRP5 Products)
Background:	Protein Function: Soluble frizzled-related proteins (sFRPS) function as modulators of Wnt
	signaling through direct interaction with Wnts. They have a role in regulating cell growth and
	differentiation in specific cell types. SFRP5 may be involved in determining the polarity of
	photoreceptor, and perhaps, other cells in the retina.
	Background: Secreted frizzled-related protein 5 is a protein that in humans is encoded by the
	SFRP5 gene. SFRP5 is a member of the SFRP family that contains a cysteine-rich domain
	homologous to the putative Wnt-binding site of Frizzled proteins. SFRPs act as soluble
	modulators of Wnt signaling. SFRP5 and SFRP1 may be involved in determining the polarity of
	photoreceptor cells in the retina. SFRP5 is highly expressed in the retinal pigment epithelium,
	and moderately expressed in the pancreas.
	Synonyms: Secreted frizzled-related protein 5,sFRP-5,Frizzled-related protein 1b,FRP-
