Target Details

Target:	Glucosylceramidase (GLCM)
Alternative Name:	GLCM (GLCM Products)
Background:	This gene encodes a lysosomal membrane protein that cleaves the beta-glucosidic linkage of

Target Details

glycosylceramide, an intermediate in glycolipid metabolism. Mutations in this gene cause Gaucher disease, a lysosomal storage disease characterized by an accumulation of glucocerebrosides. A related pseudogene is approximately 12 kb downstream of this gene on chromosome 1. Alternative splicing results in multiple transcript variants.
