### Target Details

Target:	OR4D11
Alternative Name:	OR4D11 (OR4D11 Products)
Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large
	that triggers the perception of a smell. The olfactory receptor proteins are meml family of G-protein-coupled receptors (GPCR) arising from single coding-exon ge

## Target Details

	receptors share a 7-transmembrane domain structure with many neurotransmitter and
	hormone receptors and are responsible for the recognition and G protein-mediated
	transduction of odorant signals. The olfactory receptor gene family is the largest in the
	genome. The nomenclature assigned to the olfactory receptor genes and proteins for this
	organism is independent of other organisms.
