Target Details

Target:	GAL
Alternative Name:	Galanin / GALN (GAL Products)
Background:	Galanin is a neuropeptide encoded by the GAL gene, that is widely expressed in the brain, spinal cord, and gut of humans as well as other mammals. This gene encodes a neuroendocrine
	peptide that is widely expressed in the central and peripheral nervous systems and also the

	gastrointestinal tract, pancreas, adrenal gland and urogenital tract. The encoded protein is a
	precursor that is proteolytically processed to generate two mature peptides: galanin and
	galanin message-associated peptide (GMAP). Galanin has diverse physiological functions
	including nociception, feeding and energy homeostasis, osmotic regulation and water balance.
	GMAP has been demonstrated to possess antifungal activity and hypothesized to be part of the
	innate immune system.
UniProt:	P22466
