

## Datasheet for ABIN5651775 AGT ELISA Kit

Overview

Quantity:	96 tests
Target:	AGT
Reactivity:	Human
Method Type:	Competition ELISA
Detection Range:	12.35 pg/mL - 1000 pg/mL
Minimum Detection Limit:	12.35 pg/mL
Application:	ELISA

## Product Details

Alternative Name:

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Angiotensin I (Angl). No significant cross-reactivity or interference between Angiotensin I (Angl) and analogues was observed.
Sensitivity:	4.95 pg/mL
Target Details	
Target:	AGT

Angiotensin I (AGT Products)

Target Details		
Background:	Gene Name: Angiotensin I	
	Gene Aliases: Ang-I, Angiotensin-1	
Pathways:	JAK-STAT Signaling, ACE Inhibitor Pathway, EGFR Signaling Pathway, Peptide Hormone	
	Metabolism, Regulation of Systemic Arterial Blood Pressure by Hormones, Regulation of Lipid	
	Metabolism by PPARalpha, Protein targeting to Nucleus, Feeding Behaviour, Monocarboxylic	
	Acid Catabolic Process, Dicarboxylic Acid Transport, Positive Regulation of Response to DNA	
	Damage Stimulus, Regulation of long-term Neuronal Synaptic Plasticity	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	2 h	
Plate:	Pre-coated	
Protocol:	This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal	
	antibody specific to Angiotensin I (Angl) has been pre-coated onto a microplate. A competitive	
	inhibition reaction is launched between biotin labeled Angiotensin I (Angl) and unlabeled	
	Angiotensin I (Angl) (Standards or samples) with the pre-coated antibody specific to	
	Angiotensin I (Angl). After incubation the unbound conjugate is washed off. Next, avidin	
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.	
	The amount of bound HRP conjugate is reverse proportional to the concentration of	
	Angiotensin I (AngI) in the sample. After addition of the substrate solution, the intensity of colo	
	developed is reverse proportional to the concentration of Angiotensin I (AngI) in the sample.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Angiotensin I (Angl) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Angiotensin I (AngI) were tested on 3 different plates, 8 replicates in each plate. CV(%) =	
	SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
