

Datasheet for ABIN5651776 AGT ELISA Kit

Overview

Quantity:	96 tests
Target:	AGT
Reactivity:	Mouse
Method Type:	Competition ELISA
Detection Range:	12.35 pg/mL - 1000 pg/mL
Minimum Detection Limit:	12.35 pg/mL
Application:	ELISA

Product Details

Sample Type:	Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Angiotensin I (Angl). No significant cross-reactivity or interference between Angiotensin I (Angl) and analogues was observed.	
Sensitivity:	4.72 pg/mL	
Target Details		
Target:	AGT	
Alternative Name:	Angiotensin I (AGT Products)

Target Details			
Background:	Gene Name: Angiotensin I		
	Gene Aliases: Ang-I, Angiotensin-1		
Pathways:	JAK-STAT Signaling, ACE Inhibitor Pathway, EGFR Signaling Pathway, Peptide Hormone		
	Metabolism, Regulation of Systemic Arterial Blood Pressure by Hormones, Regulation of Lipid		
	Metabolism by PPARalpha, Protein targeting to Nucleus, Feeding Behaviour, Monocarboxylic		
	Acid Catabolic Process, Dicarboxylic Acid Transport, Positive Regulation of Response to DNA		
	Damage Stimulus, Regulation of long-term Neuronal Synaptic Plasticity		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	2 h		
Plate:	Pre-coated		
Protocol:	This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal		
	antibody specific to Angiotensin I (Angl) has been pre-coated onto a microplate. A competitive		
	inhibition reaction is launched between biotin labeled Angiotensin I (AngI) and unlabeled		
	Angiotensin I (Angl) (Standards or samples) with the pre-coated antibody specific to		
	Angiotensin I (Angl). After incubation the unbound conjugate is washed off. Next, avidin		
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.		
	The amount of bound HRP conjugate is reverse proportional to the concentration of		
	Angiotensin I (AngI) in the sample. After addition of the substrate solution, the intensity of colo		
	developed is reverse proportional to the concentration of Angiotensin I (AngI) in the sample.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Angiotensin I (AngI) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Angiotensin I (AngI) were tested on 3 different plates, 8 replicates in each plate. $CV(\%)$ =		
	SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
