( )	VE	r\/		Λ/
( )	V C	I V	1	v v

Quantity:	96 tests
Target:	Apolipoprotein L 2 (APOL2)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	FLISA

#### **Product Details**

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Apolipoprotein L2 (APOL2). No significant cross-reactivity or interference between Apolipoprotein L2 (APOL2) and analogues was observed.
Sensitivity:	0.067 ng/mL

## Target Details

Target:	Apolipoprotein L 2 (APOL2)
Alternative Name:	Apolipoprotein L2 (APOL2 Products)

## **Target Details** Background: Gene Name: Apolipoprotein L2 Gene Aliases: Apo-L2, APOL-II Gene ID: 23780 UniProt: Q9BQE5 Pathways: The Global Phosphorylation Landscape of SARS-CoV-2 Infection

#### **Application Details**

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
Comment.	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.

Assay Time.	311
Plate:	Pre-coated

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Apolipoprotein L2 (APOL2). Standards or samples are then added to the appropriate microtiter plate wells with a biotinconjugated antibody specific to Apolipoprotein L2 (APOL2). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Apolipoprotein L2 (APOL2), biotinconjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzymesubstrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Apolipoprotein L2 (APOL2) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Apolipoprotein L2 (APOL2) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Apolipoprotein L2 (APOL2) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%

## Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
