

Datasheet for ABIN5652226 Biglycan ELISA Kit

Overview

Quantity:	96 tests
Target:	Biglycan (BGN)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Biglycan (BGN). No significant cross-reactivity or interference between Biglycan (BGN) and analogues was observed.
Sensitivity:	0.127 ng/mL
Target Details	
Target:	Biglycan (BGN)
Alternative Name:	Biglycan (BGN Products)

Target Details		
Background:	Gene Name: Biglycan Gene Aliases: DSPG1, PG-S1, PGI, SLRR1A, Biglycan Proteoglycan, Bone/cartilage proteoglycan I	
Gene ID:	633	
UniProt:	P21810	
Pathways:	Glycosaminoglycan Metabolic Process	

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Biglycan (BGN). Standards
	or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated
	antibody specific to Biglycan (BGN). Next, Avidin conjugated to Horseradish Peroxidase (HRP)
	is added to each microplate well and incubated. After TMB substrate solution is added, only
	those wells that contain Biglycan (BGN), biotin-conjugated antibody and enzyme-conjugated
	Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the
	addition of sulphuric acid solution and the color change is measured spectrophotometrically at
	a wavelength of 450nm \pm 10nm. The concentration of Biglycan (BGN) in the samples is then
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Biglycan (BGN) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Biglycan (BGN) were tested on 3 different plates, 8 replicates in each plate. CV(%) =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
