

## Datasheet for ABIN5652304 **BSA CLIA Kit**

Overview

Quantity:	96 tests
Target:	BSA
Reactivity:	Various Species
Method Type:	Competition ELISA
Detection Range:	1.56 μg/mL - 400 μg/mL
Minimum Detection Limit:	1.56 μg/mL
Application:	ELISA

## Product Details

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Chemiluminescent
Specificity:	This assay has high sensitivity and excellent specificity for detection of Bovine Serum Albumin (BSA). No significant cross-reactivity or interference between Bovine Serum Albumin (BSA) and analogues was observed.
Sensitivity:	0.65 μg/mL
Target Details	
Target:	BSA
Alternative Name:	Bovine Serum Albumin (BSA Products)

Target Details	
Background:	Gene Name: Bovine Serum Albumin
	Gene Aliases: Bovine Albumin, Fraction V
Pathways:	Lipid Metabolism
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	2 h
Plate:	Pre-coated
Protocol:	The microplate provided in this kit has been pre-coated with a monoclonal antibody specific to
	Bovine Serum Albumin (BSA). A competitive inhibition reaction is launched between biotin
	labeled Bovine Serum Albumin (BSA) and unlabeled Bovine Serum Albumin (BSA) (Standards or
	samples) with the pre-coated antibody specific to Bovine Serum Albumin (BSA). After
	incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish
	Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP
	conjugate is reverse proportional to the concentration of Bovine Serum Albumin (BSA) in the
	sample. Then the mixture of substrate A and B is added to generate glow light emission
	kinetics. Upon plate development, the intensity of the emitted light is reverse proportional to the
	Bovine Serum Albumin (BSA) level in the sample or standard.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Bovine Serum Albumin (BSA) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Bovine Serum Albumin (BSA) were tested on 3 different plates, 8 replicates in each plate. CV(%)
	= SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be

	assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
