

## Datasheet for ABIN5652511 CAPNL1 ELISA Kit

Overview

Quantity:	96 tests
Target:	CAPNL1
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Cell Culture Supernatant, Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Calpain 1, Large Subunit (CAPN1). No significant cross-reactivity or interference between Calpain 1, Large Subunit (CAPN1) and analogues was observed.
Sensitivity:	0.61 ng/mL
Target Details	
Target:	CAPNL1
Alternative Name:	Calpain 1, Large Subunit (CAPNL1 Products)

Background:	Gene Name: Calpain 1, Large Subunit
	Gene Aliases: PIG30, CANPL1, MuCANP, MuCL, Calpain-1 Catalytic Subunit, Calcium-Dependent
	Protease 1, Calcium-activated neutral proteinase 1, Calpain mu-type, Micromolar-calpain
Gene ID:	12333
UniProt:	O35350
Pathways:	Apoptosis
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Calpain 1, Large Subunit
	(CAPN1). Standards or samples are then added to the appropriate microtiter plate wells with a
	biotin-conjugated antibody specific to Calpain 1, Large Subunit (CAPN1). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Calpain 1, Large Subunit
	(CAPN1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in
	color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution
	and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm.
	The concentration of Calpain 1, Large Subunit (CAPN1) in the samples is then determined by

Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Calpain 1, Large Subunit (CAPN1) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Calpain 1, Large Subunit (CAPN1) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%

Application Details		
Restrictions:	For Research Use only	
Handling		
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
