

Datasheet for ABIN5652609

CRAT ELISA Kit

Overview

Quantity:	96 tests
Target:	CRAT
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	3.12 ng/mL - 200 ng/mL
Minimum Detection Limit:	3.12 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Carnitine Acetyltransferase (CRAT). No significant cross-reactivity or interference between Carnitine Acetyltransferase (CRAT) and analogues was observed.
Sensitivity:	1.32 ng/mL

Target Details

Target:	CRAT
Alternative Name:	Carnitine Acetyltransferase (CRAT Products)

Target Details

Gene ID: 311849 UniProt: Q704S8 Pathways: Monocarboxylic Acid Catabolic Process Application Details Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is 5 % within the expiration date under appropriate storage condition. To minimize on the performance, operation procedures and lab conditions, especially room te humidity, incubator temperature should be strictly controlled. It is also strongly sithe whole assay is performed by the same operator from the beginning to the end. Assay Time: 3 h Plate: Pre-coated Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microprovided in this kit has been pre-coated with an antibody specific to Carnitine Activation (CRAT). Standards or samples are then added to the appropriate microtiter plate biotin-conjugated antibody specific to Carnitine Activation Activation (CRAT). Standards or samples are then added to each microplate well an After TMB substrate solution is added, only those wells that contain Carnitine Activation (CRAT), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the enzyme-substrate reaction is terminated by the addition of sulphuric acid so color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color change is measured spectrophotometrically at a wavelength of 450nm ± 1° the color c	extra influence emperature, air uggested that

Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and Carnitine Acetyltransferase (CRAT) were tested 20 times on one plate, respective Inter-assay Precision (Precision between assays): 3 samples with low, middle and Carnitine Acetyltransferase (CRAT) were tested on 3 different plates, 8 replicates CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%	ely d high level
Restrictions: For Research Use only	

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
