

## Datasheet for ABIN5653411 Cyclin B1 ELISA Kit

Overview

Quantity:	96 tests
Target:	Cyclin B1 (CCNB1)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Cell Lysate, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Cyclin B (CCNB). No significant cross-reactivity or interference between Cyclin B (CCNB) and analogues was observed.	
Sensitivity:	0.117 ng/mL	
Target Details		
Target:	Cyclin B1 (CCNB1)	
Alternative Name:	Cyclin B (CCNB1 Products)

Target Details		
Background:	Gene Name: Cyclin B	
	Gene Aliases: CCNB1, CCN-B, G2/Mitotic-Specific Cyclin B1	
Gene ID:	891	
UniProt:	P14635	
Pathways:	Cell Division Cycle, AMPK Signaling, Mitotic G1-G1/S Phases, M Phase	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Cyclin B (CCNB). Standards	
	or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated	
	antibody specific to Cyclin B (CCNB). Next, Avidin conjugated to Horseradish Peroxidase (HRP)	
	is added to each microplate well and incubated. After TMB substrate solution is added, only	
	those wells that contain Cyclin B (CCNB), biotin-conjugated antibody and enzyme-conjugated	
	Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the	
	addition of sulphuric acid solution and the color change is measured spectrophotometrically at	
	a wavelength of 450nm $\pm$ 10nm. The concentration of Cyclin B (CCNB) in the samples is then	
	determined by comparing the O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Cyclin B (CCNB) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Cyclin B (CCNB) were tested on 3 different plates, 8 replicates in each plate. CV(%) =	
	SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
