

Datasheet for ABIN5653470 **CRELD1 ELISA Kit**

Overview

Quantity:	96 tests
Target:	CRELD1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Cysteine Rich With EGF Like Domains Protein 1 (CRELD1). No significant cross-reactivity or interference between Cysteine Rich With EGF Like Domains Protein 1 (CRELD1) and analogues was observed.
Sensitivity:	0.113 ng/mL
Target Details	
Target:	CRELD1

Alternative Name:	Cysteine Rich With EGF Like Domains Protein 1 (CRELD1 Products)

Target Details

Background:

Gene Name: Cysteine Rich With EGF Like Domains Protein 1 Gene Aliases: AVSD2, CIRRIN, Atrioventricular Septal Defect 2

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time: 3 h		
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Cysteine Rich With EGF	
	Like Domains Protein 1 (CRELD1). Standards or samples are then added to the appropriate	
	microtiter plate wells with a biotin-conjugated antibody specific to Cysteine Rich With EGF Like	
	Domains Protein 1 (CRELD1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is	
	added to each microplate well and incubated. After TMB substrate solution is added, only those	
	wells that contain Cysteine Rich With EGF Like Domains Protein 1 (CRELD1), biotin-conjugated	
	antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate	
	reaction is terminated by the addition of sulphuric acid solution and the color change is	
	measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of	
	Cysteine Rich With EGF Like Domains Protein 1 (CRELD1) in the samples is then determined by	
	comparing the O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Cysteine Rich With EGF Like Domains Protein 1 (CRELD1) were tested 20 times on one plate,	
	respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Cysteine Rich With EGF Like Domains Protein 1 (CRELD1) were tested on 3 different plates, 8	
	replicates in each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
