_					
	W	0	rv	10	W

Quantity:	96 tests	
Target:	CYP4F2	
Reactivity:	Human	
Method Type:	Sandwich ELISA	
Detection Range:	1.56 ng/mL - 100 ng/mL	
Minimum Detection Limit:	1.56 ng/mL	
Application:	ELISA	

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Cytochrome P450 4F2 (CYP4F2). No significant cross-reactivity or interference between Cytochrome P450 4F2 (CYP4F2) and analogues was observed.	
Sensitivity:	0.59 ng/mL	

Target Details

Target:	CYP4F2	
Alternative Name:	Cytochrome P450 4F2 (CYP4F2 Products)	

Target Details

Background:	Gene Name: Cytochrome P450 4F2		
	Gene Aliases: CPF2, Leukotriene-B(4)omega-hydroxylase 1, Cytochrome P450 Family 4		
	Subfamily F Polypeptide 2, 20-hydroxyeicosatetraenoic acid synthase, Arachidonic acid omega		
	hydroxylase		
Pathways:	Monocarboxylic Acid Catabolic Process		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5% within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Cytochrome P450 4F2		
	(CYP4F2). Standards or samples are then added to the appropriate microtiter plate wells with a		
	biotin-conjugated antibody specific to Cytochrome P450 4F2 (CYP4F2). Next, Avidin conjugated		
	to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB		
	substrate solution is added, only those wells that contain Cytochrome P450 4F2 (CYP4F2),		
	biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The		
	enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the colo		
	change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The		
	concentration of Cytochrome P450 4F2 (CYP4F2) in the samples is then determined by		
	comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Cytochrome P450 4F2 (CYP4F2) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Cytochrome P450 4F2 (CYP4F2) were tested on 3 different plates, 8 replicates in each plate.		
	CV(%) = SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only		

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
