

Datasheet for ABIN5653540 **DAOA ELISA Kit**

Overview

Quantity:	96 tests
Target:	DAOA
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of D-amino Acid Oxidase Activator (DAOA). No significant cross-reactivity or interference between D-amino Acid Oxidase Activator (DAOA) and analogues was observed.
Sensitivity:	0.061 ng/mL
Target Details	
Target:	DAOA
Alternative Name:	D-amino Acid Oxidase Activator (DAOA Products)

Target Details

Background:

Gene Name: D-amino Acid Oxidase Activator Gene Aliases: G72, LG72, SG72

Application Details

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
Handling	
Restrictions:	For Research Use only
	Inter-Assay: CV<12%
	Intra-Assay: CV<10%
	plate. CV(%) = SD/meanX100
	amino Acid Oxidase Activator (DAOA) were tested on 3 different plates, 8 replicates in each
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level D-
	amino Acid Oxidase Activator (DAOA) were tested 20 times on one plate, respectively
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level D-
	determined by comparing the O.D. of the samples to the standard curve.
	10nm. The concentration of D-amino Acid Oxidase Activator (DAOA) in the samples is then
	solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm
	a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric aci
	Oxidase Activator (DAOA), biotin-conjugated antibody and enzyme-conjugated Avidin will exhib
	incubated. After TMB substrate solution is added, only those wells that contain D-amino Acid
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and
	with a biotin-conjugated antibody specific to D-amino Acid Oxidase Activator (DAOA). Next,
	Activator (DAOA). Standards or samples are then added to the appropriate microtiter plate well
	provided in this kit has been pre-coated with an antibody specific to D-amino Acid Oxidase
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
Plate:	Pre-coated
Assay Time:	3 h
	the whole assay is performed by the same operator from the beginning to the end.
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	on the performance, operation procedures and lab conditions, especially room temperature, air
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than

	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
