

Datasheet for ABIN5653618 **DCK ELISA Kit**

Overview

Quantity:	96 tests
Target:	DCK
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Alternative Name:

Sample Type:	Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Deoxycytidine Kinase (DCK). No significant cross-reactivity or interference between Deoxycytidine Kinase (DCK) and analogues was observed.	
Sensitivity:	0.055 ng/mL	
Target Details		
Target:	DCK

Background:

Gene Name: Deoxycytidine Kinase

Application Details

-	specimen samples should be assayed in duplicate. Once the procedure has been started, all
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
Handling	
Restrictions:	For Research Use only
	Inter-Assay: CV<12%
	Intra-Assay: CV<10%
	SD/meanX100
	Deoxycytidine Kinase (DCK) were tested on 3 different plates, 8 replicates in each plate. CV(%) =
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Deoxycytidine Kinase (DCK) were tested 20 times on one plate, respectively
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	samples to the standard curve.
	Deoxycytidine Kinase (DCK) in the samples is then determined by comparing the O.D. of the
	is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of
	substrate reaction is terminated by the addition of sulphuric acid solution and the color change
	conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-
	substrate solution is added, only those wells that contain Deoxycytidine Kinase (DCK), biotin-
	Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB
	biotin-conjugated antibody specific to Deoxycytidine Kinase (DCK). Next, Avidin conjugated to
	(DCK). Standards or samples are then added to the appropriate microtiter plate wells with a
	provided in this kit has been pre-coated with an antibody specific to Deoxycytidine Kinase
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
Plate:	Pre-coated
Assay Time:	3 h
	the whole assay is performed by the same operator from the beginning to the end.
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	5 % within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than

	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
