

Datasheet for ABIN5653696

DDR2 ELISA Kit

Overview

Quantity:	96 tests
Target:	DDR2
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Discoidin Domain Receptor Family, Member 2 (DDR2). No significant cross-reactivity or interference between Discoidin Domain Receptor Family, Member 2 (DDR2) and analogues was observed.
Sensitivity:	0.63 ng/mL

Target Details

Target:	DDR2
Alternative Name:	Discoidin Domain Receptor Family, Member 2 (DDR2 Products)

Target Details

- i arget Details	
Background:	Gene Name: Discoidin Domain Receptor Family, Member 2
	Gene Aliases: CD167b, MIG20a, NTRKR3, TKT, TYRO10, Discoidin Domain Receptor Tyrosine
	Kinase 2, Neurotrophic tyrosine kinase, receptor-related 3, Receptor protein-tyrosine kinase TKT
Gene ID:	4921
UniProt:	Q16832
Pathways:	RTK Signaling
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5% within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Discoidin Domain Receptor
	Family, Member 2 (DDR2). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to Discoidin Domain Receptor Family,
	Member 2 (DDR2). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain Discoidin Domain Receptor Family, Member 2 (DDR2), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Discoidin
	Domain Receptor Family, Member 2 (DDR2) in the samples is then determined by comparing
	the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Discoidin Domain Receptor Family, Member 2 (DDR2) were tested 20 times on one plate,
	respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Discoidin Domain Receptor Family, Member 2 (DDR2) were tested on 3 different plates, 8
	replicates in each plate. CV(%) = SD/meanX100

Application Details

	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
