

## Datasheet for ABIN5653717

# **DDOST ELISA Kit**

	er		

Quantity:	96 tests
Target:	DDOST
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

### **Product Details**

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST). No significant cross-reactivity or interference between Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST) and analogues was observed.
Sensitivity:	0.064 ng/mL

## Target Details

Target:	DDOST
Alternative Name:	Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST Products)

## **Target Details**

Background:	Gene Name: Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase
	Gene Aliases: AGE-R1, OK/SW-cl.45, OST, OST48, WBP1, Dolichyl-diphosphooligosaccharide
	protein glycosyltransferase 48 kDa subunit, Oligosaccharyl transferase 48 kDa
Gene ID:	13200
UniProt:	054734
Pathways:	Cell RedoxHomeostasis
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Dolichyl
	Diphosphooligosaccharide Protein Glycosyltransferase (DDOST). Standards or samples are
	then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific
	to Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Dolichyl
	Diphosphooligosaccharide Protein Glycosyltransferase (DDOST), biotin-conjugated antibody
	and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Dolichyl
	Diphosphooligosaccharide Protein Glycosyltransferase (DDOST) in the samples is then
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST) were tested 20 times
	on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Dolichyl Diphosphooligosaccharide Protein Glycosyltransferase (DDOST) were tested on 3

## **Application Details**

	different plates, 8 replicates in each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
