

## Datasheet for ABIN5653797

## **CELA2A ELISA Kit**

_			
( )	V/C	rv	٨/

Quantity:	96 tests	
Target:	CELA2A	
Reactivity:	Rat	
Method Type:	Sandwich ELISA	
Detection Range:	62.5 pg/mL - 4000 pg/mL	
Minimum Detection Limit:	62.5 pg/mL	
Application:	FLISA	

#### **Product Details**

Sample Type:	Plasma, Serum	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Elastase 2A (ELA2A).  No significant cross-reactivity or interference between Elastase 2A (ELA2A) and analogues was observed.	
Sensitivity:	22.5 pg/mL	

## **Target Details**

Target:	CELA2A	
Alternative Name:	Elastase 2A (CELA2A Products)	

#### **Target Details**

Background:	Gene Name: Elastase 2A
	Gene Aliases: ELA1, PE-1, CELA2A, Chymotrypsin-Like Elastase Family Member 2A
Gene ID:	24332
UniProt:	P00774
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Elastase 2A (ELA2A).
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-
	conjugated antibody specific to Elastase 2A (ELA2A). Next, Avidin conjugated to Horseradish
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solutio
	is added, only those wells that contain Elastase 2A (ELA2A), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Elastase 2A
	(ELA2A) in the samples is then determined by comparing the O.D. of the samples to the
	standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Elastase 2A (ELA2A) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Elastase 2A (ELA2A) were tested on 3 different plates, 8 replicates in each plate. CV(%) =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

# Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
