

Datasheet for ABIN5653865

Endothelin 2 ELISA Kit

Overview

| Quantity: | 96 tests |
|--------------------------|------------------------|
| Target: | Endothelin 2 (EDN2) |
| Reactivity: | Rat |
| Method Type: | Competition ELISA |
| Detection Range: | 6.17 pg/mL - 500 pg/mL |
| Minimum Detection Limit: | 6.17 pg/mL |
| Application: | ELISA |

Product Details

| Sample Type: | Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate |
|--------------------|---|
| Analytical Method: | Quantitative |
| Detection Method: | Colorimetric |
| Specificity: | This assay has high sensitivity and excellent specificity for detection of Endothelin 2 (EDN2). No significant cross-reactivity or interference between Endothelin 2 (EDN2) and analogues was observed. |
| Sensitivity: | 2.67 pg/mL |

Target Details

| Target: | Endothelin 2 (EDN2) |
|-------------------|------------------------------|
| Alternative Name: | Endothelin 2 (EDN2 Products) |

| Target Details | |
|---------------------|---|
| Background: | Gene Name: Endothelin 2 |
| | Gene Aliases: ET2, PPET2, Preproendothelin-2 |
| Pathways: | Hormone Activity, Negative Regulation of Hormone Secretion, Regulation of Systemic Arterial |
| | Blood Pressure by Hormones |
| Application Details | |
| Comment: | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than |
| | 5 % within the expiration date under appropriate storage condition. To minimize extra influence |
| | on the performance, operation procedures and lab conditions, especially room temperature, air |
| | humidity, incubator temperature should be strictly controlled. It is also strongly suggested that |
| | the whole assay is performed by the same operator from the beginning to the end. |
| Assay Time: | 2 h |
| Plate: | Pre-coated |
| Protocol: | This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal |
| | antibody specific to Endothelin 2 (EDN2) has been pre-coated onto a microplate. A competitive |
| | inhibition reaction is launched between biotin labeled Endothelin 2 (EDN2) and unlabeled |
| | Endothelin 2 (EDN2) (Standards or samples) with the pre-coated antibody specific to Endothelin |
| | 2 (EDN2). After incubation the unbound conjugate is washed off. Next, avidin conjugated to |
| | Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of |
| | bound HRP conjugate is reverse proportional to the concentration of Endothelin 2 (EDN2) in the |
| | sample. After addition of the substrate solution, the intensity of color developed is reverse |
| | proportional to the concentration of Endothelin 2 (EDN2) in the sample. |
| Assay Precision: | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level |
| | Endothelin 2 (EDN2) were tested 20 times on one plate, respectively |
| | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level |
| | Endothelin 2 (EDN2) were tested on 3 different plates, 8 replicates in each plate. CV(%) = |
| | SD/meanX100 |
| | Intra-Assay: CV<10% |
| | Inter-Assay: CV<12% |
| Restrictions: | For Research Use only |
| Handling | |
| Handling Advice: | The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and |

Handling

| | specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption. |
|------------------|--|
| Storage: | 4 °C,-20 °C |
| Storage Comment: | -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles. |
| Expiry Date: | 4-8 months |
