

Datasheet for ABIN5654004 **EEF1G ELISA Kit**

Overview

Quantity:	96 tests
Target:	EEF1G
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	31.25 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g). No significant cross-reactivity or interference between Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g) and analogues was observed.
Sensitivity:	12.4 pg/mL
Target Details	
Target:	EEF1G

Alternative Name:	Eukaryotic Translation Elongation Factor 1 Gamma (EEF1G Products)

Target Details		
Background:	Gene Name: Eukaryotic Translation Elongation Factor 1 Gamma	
	Gene Aliases: EF1G, GIG35	
Gene ID:	1937	
UniProt:	P26641	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Eukaryotic Translation	
	Elongation Factor 1 Gamma (EEF1g). Standards or samples are then added to the appropriate	
	microtiter plate wells with a biotin-conjugated antibody specific to Eukaryotic Translation	
	Elongation Factor 1 Gamma (EEF1g). Next, Avidin conjugated to Horseradish Peroxidase (HRP	
	is added to each microplate well and incubated. After TMB substrate solution is added, only	
	those wells that contain Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g), biotin-	
	conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-	
	substrate reaction is terminated by the addition of sulphuric acid solution and the color change	
	is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of	
	Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g) in the samples is then determined	
	by comparing the O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g) were tested 20 times on one plate	
	respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Eukaryotic Translation Elongation Factor 1 Gamma (EEF1g) were tested on 3 different plates, 8	
	replicates in each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%

Application Details	
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
