

Datasheet for ABIN5654090 FADS3 ELISA Kit

Overview

Quantity:	96 tests
Target:	FADS3
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Fatty Acid Desaturase 3 (FADS3). No significant cross-reactivity or interference between Fatty Acid Desaturase 3 (FADS3) and analogues was observed.	
Sensitivity:	0.118 ng/mL	
Target Details		
Target:	FADS3	

Alternative Name: Fatty Acid Desaturase 3 (FADS3 Products)

Target Details		
Background:	Gene Name: Fatty Acid Desaturase 3	
	Gene Aliases: CYB5RP, Delta-9-Desaturase, Cytochrome b5-related protein	
Gene ID:	3995	
UniProt:	Q9Y5Q0	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Fatty Acid Desaturase 3	
	(FADS3). Standards or samples are then added to the appropriate microtiter plate wells with a	
	biotin-conjugated antibody specific to Fatty Acid Desaturase 3 (FADS3). Next, Avidin conjugated	
	to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB	
	substrate solution is added, only those wells that contain Fatty Acid Desaturase 3 (FADS3),	
	biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The	
	enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color	
	change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The	
	concentration of Fatty Acid Desaturase 3 (FADS3) in the samples is then determined by	
	comparing the O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Fatty Acid Desaturase 3 (FADS3) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Fatty Acid Desaturase 3 (FADS3) were tested on 3 different plates, 8 replicates in each plate.	
	CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
