

Datasheet for ABIN5654309 FGFR3 ELISA Kit

Overview

Quantity:	96 tests
Target:	FGFR3
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Fibroblast Growth Factor Receptor 3 (FGFR3). No significant cross-reactivity or interference between Fibroblast Growth Factor Receptor 3 (FGFR3) and analogues was observed.
Sensitivity:	0.056 ng/mL
Target Details	

Target:	FGFR3	
Alternative Name:	Fibroblast Growth Factor Receptor 3 (FGFR3 Products)

Target Details	
Background:	Gene Name: Fibroblast Growth Factor Receptor 3
	Gene Aliases: CD333, ACH, CEK2, JTK4, Achondroplasia, Thanatophoric Dwarfism
Pathways:	RTK Signaling, Fc-epsilon Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin
	Signaling Pathway, Stem Cell Maintenance, Growth Factor Binding
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Fibroblast Growth Factor
	Receptor 3 (FGFR3). Standards or samples are then added to the appropriate microtiter plate
	wells with a biotin-conjugated antibody specific to Fibroblast Growth Factor Receptor 3
	(FGFR3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate
	well and incubated. After TMB substrate solution is added, only those wells that contain
	Fibroblast Growth Factor Receptor 3 (FGFR3), biotin-conjugated antibody and enzyme-
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by
	the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Fibroblast
	Growth Factor Receptor 3 (FGFR3) in the samples is then determined by comparing the O.D. of
	the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Fibroblast Growth Factor Receptor 3 (FGFR3) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Fibroblast Growth Factor Receptor 3 (FGFR3) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
