

## Datasheet for ABIN5654503 **GGH ELISA Kit**

Overview

Quantity:	96 tests
Target:	GGH
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Gamma-Glutamyl Hydrolase (gGH). No significant cross-reactivity or interference between Gamma-Glutamyl Hydrolase (gGH) and analogues was observed.
Sensitivity:	0.056 ng/mL
Target Details	
Target:	GGH
Alternative Name:	Gamma-Glutamyl Hydrolase (GGH Products)

Target Details	
Background:	Gene Name: Gamma-Glutamyl Hydrolase Gene Aliases: GH, conjugase, folylpolygammaglutamyl hydrolase, Gamma-Glu-X carboxypeptidase
Gene ID:	8836
UniProt:	Q92820
Pathways:	SARS-CoV-2 Protein Interactome

## Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Gamma-Glutamyl
	Hydrolase (gGH). Standards or samples are then added to the appropriate microtiter plate wells
	with a biotin-conjugated antibody specific to Gamma-Glutamyl Hydrolase (gGH). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Gamma-Glutamyl
	Hydrolase (gGH), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a
	change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid
	solution and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$
	10nm. The concentration of Gamma-Glutamyl Hydrolase (gGH) in the samples is then
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Gamma-Glutamyl Hydrolase (gGH) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Gamma-Glutamyl Hydrolase (gGH) were tested on 3 different plates, 8 replicates in each plate.
	CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%

Application Details		
Restrictions:	For Research Use only	
Handling		
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
