antibodies

Datasheet for ABIN5654675 Glutamic Acid Decarboxylase ELISA Kit

Overview

Quantity:	96 tests
Target:	Glutamic Acid Decarboxylase (GAD)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

Product Details

Plasma, Serum
Quantitative
Colorimetric
This assay has high sensitivity and excellent specificity for detection of Glutamic Acid Decarboxylase (GAD). No significant cross-reactivity or interference between Glutamic Acid Decarboxylase (GAD) and analogues was observed.
0.59 ng/mL
Glutamic Acid Decarboxylase (GAD)
Glutamic Acid Decarboxylase (GAD Products)

Background:	Gene Name: Glutamic Acid Decarboxylase
	Gene Aliases: Glutamate Decarboxylase

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	2 - 3 h
Plate:	Pre-coated
Protocol:	This assay employs the competitive inhibition enzyme immunoassay technique. An antibody
	specific to Glutamic Acid Decarboxylase (GAD) has been pre-coated onto a microplate. A
	competitive inhibition reaction is launched between Horseradish Peroxidase (HRP) labeled
	Glutamic Acid Decarboxylase (GAD) and unlabeled Glutamic Acid Decarboxylase (GAD)
	(Standards or samples) with the pre-coated antibody specific to Glutamic Acid Decarboxylase
	(GAD). After incubation the unbound conjugate is washed off. The amount of bound HRP
	conjugate is reverse proportional to the concentration of Glutamic Acid Decarboxylase (GAD) ir
	the sample. After addition of the substrate solution, the intensity of color developed is reverse
	proportional to the concentration of Glutamic Acid Decarboxylase (GAD) in the sample.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Glutamic Acid Decarboxylase (GAD) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Glutamic Acid Decarboxylase (GAD) were tested on 3 different plates, 8 replicates in each plate
	CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
	The Step Solution is esidie. Do not allow to contact akin or avec. Calibrators, controls and
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
Handling Advice:	specimen samples should be assayed in duplicate. Once the procedure has been started, all

Handling

Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
