

## Datasheet for ABIN5654679

### **GLS2 ELISA Kit**

#### Overview

Quantity:	96 tests
Target:	GLS2
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

#### **Product Details**

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Glutaminase 2 (GLS2). No significant cross-reactivity or interference between Glutaminase 2 (GLS2) and analogues was observed.
Sensitivity:	0.53 ng/mL

# Target Details

Target:	GLS2
Alternative Name:	Glutaminase 2 (GLS2 Products)

## Target Details

Disarboxylic Acid Transport, Warburg Effect  Application Details  Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less the 5 % within the expiration date under appropriate storage condition. To minimize extra influer on the performance, operation procedures and lab conditions, especially room temperature, humidity, incubator temperature should be strictly controlled. It is also strongly suggested the whole assay is performed by the same operator from the beginning to the end.  Assay Time: 3 h  Pre coated  The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Glutaminase 2 (GLS2). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Glutaminase 2 (GLS2). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Glutaminase 2 (GLS2). Next, Avidin conjugated to Horseradic Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solutis added, only those wells that contain Glutaminase 2 (GLS2), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Glutaminase (GLS2) in the samples is then determined by comparing the O.D. of the samples to the stand curve.  Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Glutaminase 2 (GLS2) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Glutaminase 2 (GLS2) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay. CV<10% Inter-Assay. CV<10% Inter-Assay. CV<10%	Background:	Gene Name: Glutaminase 2

Application Details  The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less this 5% within the expiration date under appropriate storage condition. To minimize extra influer on the performance, operation procedures and lab conditions, especially room temperature, humidity, incubator temperature should be strictly controlled. It is also strongly suggested the whole assay is performed by the same operator from the beginning to the end.  Assay Time:  3 h  Plate: Pre-coated  Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Glutaminase 2 (GLS2). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Glutaminase 2 (GLS2). Next, Avidin conjugated to Horseradia Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solut is added, only those wells that contain Glutaminase 2 (GLS2), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Glutaminase (GLS2) in the samples is then determined by comparing the 0.0. of the samples to the stand curve.  Assay Precision:  Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Glutaminase 2 (GLS2) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Glutaminase 2 (GLS2) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<10% Int	Gene ID:	216456

# Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
