

Datasheet for ABIN5654715 GSTM3 ELISA Kit

Overview

Quantity:	96 tests
Target:	GSTM3
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	3.12 ng/mL - 200 ng/mL
Minimum Detection Limit:	3.12 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Glutathione S Transferase Mu 3, Brain (GSTm3). No significant cross-reactivity or interference between Glutathione S Transferase Mu 3, Brain (GSTm3) and analogues was observed.
Sensitivity:	1.15 ng/mL
Target Details	

Target:	GSTM3
Alternative Name:	Glutathione S Transferase Mu 3, Brain (GSTM3 Products)

Target Details		
Background:	Gene Name: Glutathione S Transferase Mu 3, Brain	
	Gene Aliases: GST-M3, GST5, GSTB, GSTM3-3, GTM3	
Gene ID:	2947	
UniProt:	P21266	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Glutathione S Transferase	
	Mu 3, Brain (GSTm3). Standards or samples are then added to the appropriate microtiter plate	
	wells with a biotin-conjugated antibody specific to Glutathione S Transferase Mu 3, Brain	
	(GSTm3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each	
	microplate well and incubated. After TMB substrate solution is added, only those wells that	
	contain Glutathione S Transferase Mu 3, Brain (GSTm3), biotin-conjugated antibody and	
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is	
	terminated by the addition of sulphuric acid solution and the color change is measured	
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Glutathione S	
	Transferase Mu 3, Brain (GSTm3) in the samples is then determined by comparing the O.D. of	
	the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Glutathione S Transferase Mu 3, Brain (GSTm3) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Glutathione S Transferase Mu 3, Brain (GSTm3) were tested on 3 different plates, 8 replicates i	
	each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
