

Datasheet for ABIN5654738

GLDC CLIA Kit

Overview

| Quantity: | 96 tests |
|--------------------------|----------------------------|
| Target: | GLDC |
| Reactivity: | Human |
| Method Type: | Sandwich ELISA |
| Detection Range: | 156.25 pg/mL - 10000 pg/mL |
| Minimum Detection Limit: | 156.25 pg/mL |
| Application: | ELISA |

Product Details

| Sample Type: | Cell Lysate, Tissue Homogenate |
|--------------------|---|
| Analytical Method: | Quantitative |
| Detection Method: | Chemiluminescent |
| Specificity: | This assay has high sensitivity and excellent specificity for detection of Glycine Dehydrogenase (GLDC). No significant cross-reactivity or interference between Glycine Dehydrogenase (GLDC) and analogues was observed. |
| Sensitivity: | 4.7 pg/mL |

Target Details

| Target: | GLDC |
|-------------------|---------------------------------------|
| Alternative Name: | Glycine Dehydrogenase (GLDC Products) |

| Target Details | |
|---------------------|---|
| Background: | Gene Name: Glycine Dehydrogenase |
| | Gene Aliases: GCSP, NKH, Decarboxylating, Glycine Decarboxylase, Glycine Cleavage System |
| | Protein P, Glycine dehydrogenase (aminomethyl-transferring) |
| Gene ID: | 2731 |
| UniProt: | P23378 |
| Application Details | |
| Comment: | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than |
| | 5% within the expiration date under appropriate storage condition. To minimize extra influence |
| | on the performance, operation procedures and lab conditions, especially room temperature, air |
| | humidity, incubator temperature should be strictly controlled. It is also strongly suggested that |
| | the whole assay is performed by the same operator from the beginning to the end. |
| Assay Time: | 2 - 3 h |
| Plate: | Pre-coated |
| Protocol: | The microplate provided in this kit has been pre-coated with an antibody specific to Glycine |
| | Dehydrogenase (GLDC). Standards or samples are then added to the appropriate microplate |
| | wells with a biotin-conjugated antibody specific to Glycine Dehydrogenase (GLDC). Next, Avidin |
| | conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. |
| | Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon |
| | plate development, the intensity of the emitted light is proportional to the Glycine |
| | Dehydrogenase (GLDC) level in the sample or standard., |
| Assay Precision: | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level |
| | Glycine Dehydrogenase (GLDC) were tested 20 times on one plate, respectively |
| | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level |
| | Glycine Dehydrogenase (GLDC) were tested on 3 different plates, 8 replicates in each plate. |
| | CV(%) = SD/meanX100 |
| | Intra-Assay: CV<10% |
| | Inter-Assay: CV<12% |
| Restrictions: | For Research Use only |
| Handling | |

Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be

Handling Advice:

Handling

| | assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption. |
|------------------|--|
| Storage: | 4 °C,-20 °C |
| Storage Comment: | -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles. |
| Expiry Date: | 4-8 months |
