

Datasheet for ABIN5654763 **GPA33 ELISA Kit**

Overview

Quantity:	96 tests
Target:	GPA33
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Alternative Name:

Sample Type:	Cell Lysate, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Glycoprotein A33 (GPA33). No significant cross-reactivity or interference between Glycoprotein A33 (GPA33) and analogues was observed.	
Sensitivity:	0.112 ng/mL	
Target Details		
Target:	GPA33

Glycoprotein A33 (GPA33 Products)

Target Details			
Gene Name: Glycoprotein A33			
Gene Aliases: Cell surface A33 antigen			
360873			
D3ZRJ6			
The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than			
5 % within the expiration date under appropriate storage condition. To minimize extra influence			
on the performance, operation procedures and lab conditions, especially room temperature, air			
humidity, incubator temperature should be strictly controlled. It is also strongly suggested that			
the whole assay is performed by the same operator from the beginning to the end.			
3 h			
Pre-coated			
The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate			
provided in this kit has been pre-coated with an antibody specific to Glycoprotein A33 (GPA33).			
Standards or samples are then added to the appropriate microtiter plate wells with a biotin-			
conjugated antibody specific to Glycoprotein A33 (GPA33). Next, Avidin conjugated to			
Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB			
substrate solution is added, only those wells that contain Glycoprotein A33 (GPA33), biotin-			
conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-			
substrate reaction is terminated by the addition of sulphuric acid solution and the color change			
is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of			
Glycoprotein A33 (GPA33) in the samples is then determined by comparing the O.D. of the			
samples to the standard curve.			
Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level			
Glycoprotein A33 (GPA33) were tested 20 times on one plate, respectively			
Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level			
Glycoprotein A33 (GPA33) were tested on 3 different plates, 8 replicates in each plate. $CV(\%)$ =			
SD/meanX100			
Intra-Assay: CV<10%			
Inter-Assay: CV<12%

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
