

Datasheet for ABIN5654910 GHSR ELISA Kit

Overview

Quantity:	96 tests
Target:	GHSR
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Growth Hormone Secretagogue Receptor (GHSR). No significant cross-reactivity or interference between Growth Hormone Secretagogue Receptor (GHSR) and analogues was observed.
Sensitivity:	0.055 ng/mL
Target Details	

Target:	GHSR	
Alternative Name:	Growth Hormone Secretagogue Receptor (GHSR Products)

Target Details	
Background:	Gene Name: Growth Hormone Secretagogue Receptor
	Gene Aliases: GHRP, GH-releasing peptide receptor, Ghrelin receptor
Pathways:	Hormone Transport, Negative Regulation of Hormone Secretion, Feeding Behaviour
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Growth Hormone
	Secretagogue Receptor (GHSR). Standards or samples are then added to the appropriate
	microtiter plate wells with a biotin-conjugated antibody specific to Growth Hormone
	Secretagogue Receptor (GHSR). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is
	added to each microplate well and incubated. After TMB substrate solution is added, only thos
	wells that contain Growth Hormone Secretagogue Receptor (GHSR), biotin-conjugated antiboc
	and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Growth
	Hormone Secretagogue Receptor (GHSR) in the samples is then determined by comparing the
	O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Growth Hormone Secretagogue Receptor (GHSR) were tested 20 times on one plate,
	respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Growth Hormone Secretagogue Receptor (GHSR) were tested on 3 different plates, 8 replicate
	in each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
