

## Datasheet for ABIN5655141 HTRA4 ELISA Kit

Overview

Quantity:	96 tests
Target:	HTRA4
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.78 ng/mL - 50 ng/mL
Minimum Detection Limit:	0.78 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of High Temperature Requirement Factor A4 (HTRA4). No significant cross-reactivity or interference between High Temperature Requirement Factor A4 (HTRA4) and analogues was observed.
Sensitivity:	0.32 ng/mL
Target Details	

Target:	HTRA4
Alternative Name:	High Temperature Requirement Factor A4 (HTRA4 Products)

## Target Details

Background:

Gene Name: High Temperature Requirement Factor A4 Gene Aliases: HtrA Serine Peptidase 4

## **Application Details**

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to High Temperature		
	Requirement Factor A4 (HTRA4). Standards or samples are then added to the appropriate		
	microtiter plate wells with a biotin-conjugated antibody specific to High Temperature		
	Requirement Factor A4 (HTRA4). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is		
	added to each microplate well and incubated. After TMB substrate solution is added, only those		
	wells that contain High Temperature Requirement Factor A4 (HTRA4), biotin-conjugated		
	antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate		
	reaction is terminated by the addition of sulphuric acid solution and the color change is		
	measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of		
	High Temperature Requirement Factor A4 (HTRA4) in the samples is then determined by		
	comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	High Temperature Requirement Factor A4 (HTRA4) were tested 20 times on one plate,		
	respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	High Temperature Requirement Factor A4 (HTRA4) were tested on 3 different plates, 8		
	replicates in each plate. CV(%) = SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
