_			
()	V/C	rv	٨/

Quantity:	96 tests
Target:	HMGCS1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS). No significant cross-reactivity or interference between Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS) and analogues was observed.
Sensitivity:	0.053 ng/mL

Target Details

Target:	HMGCS1
Alternative Name:	Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS1 Products)

Target Details

Background:	Gene Name: Hydroxymethylglutaryl Coenzyme A Synthase		
	Gene Aliases: HMGCS1, 3-Hydroxy-3-Methylglutaryl-Coenzyme A Synthase 1,Soluble, HMG-CoA		
	Synthase		
Gene ID:	3157		
UniProt:	Q01581		
Pathways:	Regulation of Lipid Metabolism by PPARalpha		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5% within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Hydroxymethylglutaryl		
	Coenzyme A Synthase (HMGCS). Standards or samples are then added to the appropriate		
	microtiter plate wells with a biotin-conjugated antibody specific to Hydroxymethylglutaryl		
	Coenzyme A Synthase (HMGCS). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is		
	added to each microplate well and incubated. After TMB substrate solution is added, only those		
	wells that contain Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS), biotin-conjugated		
	antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate		
	reaction is terminated by the addition of sulphuric acid solution and the color change is		
	measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of		
	Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS) in the samples is then determined by		
	comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS) were tested 20 times on one plate,		
	respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Hydroxymethylglutaryl Coenzyme A Synthase (HMGCS) were tested on 3 different plates, 8		
	replicates in each plate. CV(%) = SD/meanX100		

Application Details

	Intra-Assay: CV<10% Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
