Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Inhibitor Of Kappa-Light
	Polypeptide Gene Enhancer In B-Cells Kinase Beta (IkBKb). Standards or samples are then
	added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to
	Inhibitor Of Kappa-Light Polypeptide Gene Enhancer In B-Cells Kinase Beta (IkBKb). Next, Avidir
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Inhibitor Of Kappa-Light
	Polypeptide Gene Enhancer In B-Cells Kinase Beta (IkBKb), biotin-conjugated antibody and

Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
