Quantity:	96 tests	
Target:	Integrin beta 3 (ITGB3)	
Reactivity:	Human	
Method Type:	Sandwich ELISA	
Detection Range:	0.781 ng/mL - 50 ng/mL	
Minimum Detection Limit:	0.781 ng/mL	
Application:	ELISA	

#### **Product Details**

Sample Type:	Cell Culture Supernatant, Cell Lysate, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Integrin Beta 3 (ITGb3).  No significant cross-reactivity or interference between Integrin Beta 3 (ITGb3) and analogues was observed.	
Sensitivity:	0.31 ng/mL	

## **Target Details**

Target:	Integrin beta 3 (ITGB3)	
Alternative Name:	Integrin Beta 3 (ITGB3 Products)	

## Target Details

Background:	Gene Name: Integrin Beta 3		
	Gene Aliases: CD61, ITG-B3, GP3A, GP3-A, GpIIIa, Platelet Membrane Glycoprotein IIIa		
Gene ID:	3690		
UniProt:	P05106		
Pathways:	Regulation of G-Protein Coupled Receptor Protein Signaling, Signaling Events mediated by		
	VEGFR1 and VEGFR2, Smooth Muscle Cell Migration, Integrin Complex		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Integrin Beta 3 (ITGb3).		
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-		
	conjugated antibody specific to Integrin Beta 3 (ITGb3). Next, Avidin conjugated to Horseradish		
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution		
	is added, only those wells that contain Integrin Beta 3 (ITGb3), biotin-conjugated antibody and		
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is		
	terminated by the addition of sulphuric acid solution and the color change is measured		
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Integrin Beta 3		
	(ITGb3) in the samples is then determined by comparing the O.D. of the samples to the		
	standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Integrin Beta 3 (ITGb3) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Integrin Beta 3 (ITGb3) were tested on 3 different plates, 8 replicates in each plate. CV(%) =		
	SD/meanX100		
	Intra-Assay: CV<10%		

## **Application Details**

Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
