

Datasheet for ABIN5655853 IL18BP ELISA Kit

Overview

Quantity:	96 tests
Target:	IL18BP
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	0.625 ng/mL - 40 ng/mL
Minimum Detection Limit:	0.625 ng/mL
Application:	ELISA

Product Details

Alternative Name:

Sample Type:	Plasma, Serum	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Interleukin 18 Binding Protein (IL18BP). No significant cross-reactivity or interference between Interleukin 18 Binding Protein (IL18BP) and analogues was observed.	
Sensitivity:	0.215 ng/mL	
Target Details		
Target:	IL18BP

Interleukin 18 Binding Protein (IL18BP Products)

Target Details			
Background:	Gene Name: Interleukin 18 Binding Protein		
	Gene Aliases: IL18BPa, MC51L-53L-54L Homolog Gene Product, Tadekinig-alfa		
Gene ID:	84388		
UniProt:	Q9JLN2		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Interleukin 18 Binding		
	Protein (IL18BP). Standards or samples are then added to the appropriate microtiter plate wells		
	with a biotin-conjugated antibody specific to Interleukin 18 Binding Protein (IL18BP). Next,		
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and		
	incubated. After TMB substrate solution is added, only those wells that contain Interleukin 18		
	Binding Protein (IL18BP), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit		
	a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid		
	solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm		
	10nm. The concentration of Interleukin 18 Binding Protein (IL18BP) in the samples is then		
	determined by comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Interleukin 18 Binding Protein (IL18BP) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Interleukin 18 Binding Protein (IL18BP) were tested on 3 different plates, 8 replicates in each		
	plate. CV(%) = SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
