

Datasheet for ABIN5655857

IL-19 ELISA Kit

Overview

Quantity:	96 tests
Target:	IL-19 (IL19)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

Product Details

Sample Type:	Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Interleukin 19 (IL19). No significant cross-reactivity or interference between Interleukin 19 (IL19) and analogues was observed.
Sensitivity:	5.5 pg/mL

Target Details

Target:	IL-19 (IL19)
Alternative Name:	Interleukin 19 (IL19 Products)

Target Details

Protein Gene ID: 29949 UniProt: Q9UHDO Application Details Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less it 5 % within the expiration date under appropriate storage condition. To minimize extra influe on the performance, operation procedures and lab conditions, especially room temperature humidity, incubator temperature should be strictly controlled. It is also strongly suggested the whole assay is performed by the same operator from the beginning to the end. Assay Time: 3 h Plate: Pre-costed Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-costed with an antibody specific to Interleukin 19 (IL19). Standards or samples are then added to the appropriate microtiter plate wells with a biotic conjugated antibody specific to Interleukin 19 (IL19). Next, Avidin conjugated to Horserate so I sa added, only those wells that contain Interleukin 19 (IL19), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Interleukin 19 (IL19) in the samples is then determined by comparing the O.D. of the samples to the stancourve. Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high leve Interleukin 19 (IL19) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high leve Interleukin 19 (IL19) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<10%	Background:	Gene Name: Interleukin 19
Application Details Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less the 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature humidity, incubator temperature should be strictly controlled. It is also strongly suggested the whole assay is performed by the same operator from the beginning to the end. Assay Time: 3 h Plate: Pre-coated Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to interleukin 19 (IL19). Standards or samples are then added to the appropriate microtiter plate wells with a biotin conjugated antibody specific to Interleukin 19 (IL19). Next, Avidin conjugated to Horseradis Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate sol is added, only those wells that contain Interleukin 19 (IL19), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450mm ± 10mm. The concentration of Interleukin (IL19) in the samples is then determined by comparing the O.D. of the samples to the stand curve. Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high leve Interleukin 19 (IL19) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high leve Interleukin 19 (IL19) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: C		Gene Aliases: MDA1, ZMDA1, IL-10C, NG.1, Melanoma Differentiation Associated Protein-Like Protein

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
