

# Datasheet for ABIN5656132 **JAK3 ELISA Kit**

# I Product page

#### Overview

Quantity:	96 tests
Target:	JAK3
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

#### **Product Details**

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Janus Kinase 3 (JAK3). No significant cross-reactivity or interference between Janus Kinase 3 (JAK3) and analogues was observed.
Sensitivity:	6.2 pg/mL

# Target Details

Target:	JAK3
Alternative Name:	Janus Kinase 3 (JAK3 Products)

# Target Details

Background:	Gene Name: Janus Kinase 3
	Gene Aliases: JAKL, L-JAK, LJAK, A Protein Tyrosine Kinase,Leukocyte, Leukocyte janus kinase
	Tyrosine-protein kinase JAK3
Pathways:	JAK-STAT Signaling, RTK Signaling, Response to Growth Hormone Stimulus, Regulation of
	Leukocyte Mediated Immunity, Production of Molecular Mediator of Immune Response, Proteir
	targeting to Nucleus, Activated T Cell Proliferation, Unfolded Protein Response
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Janus Kinase 3 (JAK3).
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-
	conjugated antibody specific to Janus Kinase 3 (JAK3). Next, Avidin conjugated to Horseradish
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution
	is added, only those wells that contain Janus Kinase 3 (JAK3), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Janus Kinase
	3 (JAK3) in the samples is then determined by comparing the O.D. of the samples to the
	standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Janus Kinase 3 (JAK3) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Janus Kinase 3 (JAK3) were tested on 3 different plates, 8 replicates in each plate. CV(%) =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%

# **Application Details**

Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
