

# Datasheet for ABIN5656149

# Kallikrein 13 ELISA Kit

#### Overview

Quantity:	96 tests
Target:	Kallikrein 13 (KLK13)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	31.25 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

### **Product Details**

Sample Type:	Cell Lysate, Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Kallikrein 13 (KLK13).  No significant cross-reactivity or interference between Kallikrein 13 (KLK13) and analogues was observed.
Sensitivity:	12.6 pg/mL

## **Target Details**

Target:	Kallikrein 13 (KLK13)
Alternative Name:	Kallikrein 13 (KLK13 Products)

## Target Details

Plate: Pre-coat  Protocol: The test provided	bility of kit is determined by the loss rate of activity. The loss rate of this kit is less than nin the expiration date under appropriate storage condition. To minimize extra influence performance, operation procedures and lab conditions, especially room temperature, air y, incubator temperature should be strictly controlled. It is also strongly suggested that ble assay is performed by the same operator from the beginning to the end.
Protocol: The test provided	
provided	ted
Peroxida is added enzyme- terminat spectrop	t principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate d in this kit has been pre-coated with an antibody specific to Kallikrein 13 (KLK13). It ds or samples are then added to the appropriate microtiter plate wells with a biotinated antibody specific to Kallikrein 13 (KLK13). Next, Avidin conjugated to Horseradish ase (HRP) is added to each microplate well and incubated. After TMB substrate solution d, only those wells that contain Kallikrein 13 (KLK13), biotin-conjugated antibody and r-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is ted by the addition of sulphuric acid solution and the color change is measured photometrically at a wavelength of 450nm ± 10nm. The concentration of Kallikrein 13 in the samples is then determined by comparing the O.D. of the samples to the d curve.
Kallikreir Inter-ass Kallikreir SD/mea Intra-Ass	say Precision (Precision within an assay): 3 samples with low, middle and high level in 13 (KLK13) were tested 20 times on one plate, respectively say Precision (Precision between assays): 3 samples with low, middle and high level in 13 (KLK13) were tested on 3 different plates, 8 replicates in each plate. CV(%) = anX100 say: CV<10%

# Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
