Ki-67 ELISA Kit

_					
	1//	r	Vİ	\triangle	۸/
	V		VI		/ V

Quantity:	96 tests	
Target:	Ki-67 (MKI67)	
Reactivity:	Human	
Method Type:	Sandwich ELISA	
Detection Range:	0.312 ng/mL - 20 ng/mL	
Minimum Detection Limit:	0.312 ng/mL	
Application:	ELISA	

Product Details

Sample Type:	Cell Culture Supernatant, Cell Lysate, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Ki-67 Protein (Ki67P). No significant cross-reactivity or interference between Ki-67 Protein (Ki67P) and analogues was observed.	
Sensitivity:	0.112 ng/mL	

Target Details

Target:	Ki-67 (MKI67)
Alternative Name:	Ki-67 Protein (MKI67 Products)

Target Details

Background:	Gene Name: Ki-67 Protein		
	Gene Aliases: MKI67, KIA, Ki-67, Antigen Identified By Monoclonal Antibody Ki-67		
Gene ID:	4288		
UniProt:	P46013		
Pathways:	Glycosaminoglycan Metabolic Process		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5 % within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Ki-67 Protein (Ki67P). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Ki-67 Protein (Ki67P). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Ki-67 Protein (Ki67P), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Ki-67 Protein (Ki67P) in the samples is then determined by comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Ki-67 Protein (Ki67P) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Ki-67 Protein (Ki67P) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%		
Restrictions:	For Research Use only		

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
