KISS1 ELISA Kit

_					
	W	0	rv	10	W

Quantity:	96 tests
Target:	KISS1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	31.2 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.2 pg/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Kisspeptin 1 (KISS1). No significant cross-reactivity or interference between Kisspeptin 1 (KISS1) and analogues was observed.
Sensitivity:	13.1 pg/mL

Target Details

Target:	KISS1
Alternative Name:	Kisspeptin 1 (KISS1 Products)

Target Details

5 % within the expiration date under appropriate storage condition. To minimize extra int on the performance, operation procedures and lab conditions, especially room temperat humidity, incubator temperature should be strictly controlled. It is also strongly suggeste the whole assay is performed by the same operator from the beginning to the end. Assay Time: 3 h Plate: Pre-coated Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter pi provided in this kit has been pre-coated with an antibody specific to Kisspeptin 1 (KISST) Standards or samples are then added to the appropriate microtiter plate wells with a bio conjugated antibody specific to Kisspeptin 1 (KISST). Next, Avidin conjugated to Horsera Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate is added, only those wells that contain Kisspeptin 1 (KISST), biotin-conjugated antibody enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Kisspej (KISST) in the samples is then determined by comparing the O.D. of the samples to the standard curve. Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high le Kisspeptin 1 (KISST) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high le Kisspeptin 1 (KISST) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%	Background:	Gene Name: Kisspeptin 1
Pathways: Positive Regulation of Peptide Hormone Secretion Application Details Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less 5 % within the expiration date under appropriate storage condition. To minimize extra infon the performance, operation procedures and lab conditions, especially room temperat humidity, incubator temperature should be strictly controlled. It is also strongly suggeste the whole assay is performed by the same operator from the beginning to the end. Assay Time: 3 h Plate: Pre-coated Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter p provided in this kit has been pre-coated with an antibody specific to Kisspeptin 1 (KISST) Standards or samples are then added to the appropriate microtiter plate wells with a bio conjugated antibody specific to Kisspeptin 1 (KISST). Next, Avidin conjugated to Horsere Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate is added, only those wells that contain Kisspeptin 1 (KISST), biotin-conjugated antibody enzyme conjugated Avidin will exhibit a change in color. The enzyme substrate reaction terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Kisspej (KISST) in the samples is then determined by comparing the O.D. of the samples to the standard curve. Assay Precision: Intra-assay Precision (Precision between assays): 3 samples with low, middle and high le Kisspeptin 1 (KISST) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high le Kisspeptin 1 (KISST) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high le Kisspeptin 1 (KISST) were tested 20 times on one plate, Precision each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<10%		Gene Aliases: Metastin, KiSS-1 Metastasis-Suppressor
Pathways: Positive Regulation of Peptide Hormone Secretion Application Details The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less 5 % within the expiration date under appropriate storage condition. To minimize extra infonthe performance, operation procedures and lab conditions, especially room temperate humidity, incubator temperature should be strictly controlled. Restrictions: For Research Use only	Restrictions:	For Research Use only

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
